The gravitational force (G) of the earth pulls downward and is proportional to the mass of an object. In Fig. 2.5, the gravitational force (G) is proportional to the mass of the red block. The gravitational force on an object is also called weight. The force due to gravity is greater on objects that are more massive, or weigh more. The buoyant force (B) of water pushes up. In the third century ...

Introduction. A map can be simply defined as a graphic representation of the real world. This representation is always an abstraction of reality. Because of the infinite nature of our Universe it is impossible to capture all of the complexity found in the real world. For example, topographic maps abstract the three-dimensional real world at a reduced scale on a two-dimensional plane of paper. ...

Physical Geology. Chapter 1 Introduction to Geology. 1.2 Why Study Earth? The simple answer to this question is that Earth is our home — our only home for the foreseeable future — and in order to ensure that it continues to be a great place to live, we need to understand how it works. Another answer is that some of us can't help but study it because it's fascinating. But there is more ...
